

This screenshot shows the PyCharm IDE with the file `electricbill.py` open. The code calculates the total amount owed based on kW hours used. The Run console shows the program was executed with an input of 764, resulting in an amount owed of \$58.31612.

```
1 kw_hours = int(input("Enter the KW hours used: "))
2 if kw_hours > 1000:
3     first_rate = 1000 * 7.633
4     extra_hours = kw_hours - 1000
5     extra_rate = extra_hours * 9.259
6     total = (first_rate + extra_rate) / 100
7 else:
8     total = (kw_hours * 7.633) / 100
9
10 print(f"Amount owed is ${total}")
```

Run electricbill

C:\Users\alexa\PycharmProjects\PythonProject3\.venv\Scripts\python.exe C:\Users\alexa\PycharmProjects\PythonProject3\electricbill.py

Enter the KW hours used: 764

Amount owed is \$58.31612

Process finished with exit code 0

This screenshot shows the PyCharm IDE with the file `electricbill.py` open. The code calculates the total amount owed based on kW hours used. The Run console shows the program was executed with an input of 1500, resulting in an amount owed of \$122.625.

```
1 kw_hours = int(input("Enter the KW hours used: "))
2 if kw_hours > 1000:
3     first_rate = 1000 * 7.633
4     extra_hours = kw_hours - 1000
5     extra_rate = extra_hours * 9.259
6     total = (first_rate + extra_rate) / 100
7 else:
8     total = (kw_hours * 7.633) / 100
9
10 print(f"Amount owed is ${total}")
```

Run electricbill

C:\Users\alexa\PycharmProjects\PythonProject3\.venv\Scripts\python.exe C:\Users\alexa\PycharmProjects\PythonProject3\electricbill.py
